About Me

Application and Production Support Engineer with 5+ years of experience supporting enterprise and financial applications across production, infrastructure, and data environments. Strong background in L2 application support, SQL-based troubleshooting, data validation, root cause analysis, incident management, Linux/Windows environments, monitoring, and cloud-hosted applications.

Experienced in analyzing complex production issues through application logs, SQL queries, data reconciliation, system monitoring, and cross-functional collaboration with development and operations teams. Hands-on exposure to AWS, Python, Java, PostgreSQL, Microsoft SQL Server, MySQL, Datadog, Splunk, ServiceNow and Jira

Currently focused on operation automation, cloud technologies, scripting tools and AI/ML Engineering.

Skills

Application & Production Support

L2 Application Support • Production Support • Incident Management • Problem Management • Root Cause Analysis (RCA) • SLA Management • Production Troubleshooting • Application Maintenance • Deployment Validation • Corrective & Preventive Actions.

Cloud/Infrastructure & DevOps

AWS • Kubernetes • Linux / Unix • Windows Server • Azure Active Directory • AWS IAM • Server Monitoring • Application Monitoring.

Automation & Development

Support scripting with exposure to Python • JavaScript • HTML • CSS • REST API • REACT • Node.js

Version Control & CI/CD

Git • GitHub • Bitbucket • Branching • Pull Request • Code Reviews • Merge Conflicts • Repository Management • CI/CD Pipelines

Databases & Data

SQL • PostgreSQL • Microsoft SQL Server • MySQL • Complex Queries • Joins • CTEs • Stored Procedures • Data Validation • Data Integrity • Data Reconciliation • ETL Support • Query Optimization.

Monitoring & Observability

Datadog • Splunk • PagerDuty • Moogsoft • BigPanda

ITSM & Access Management

Incidents • Change and problem management • Access provisioning • Security-related ServiceNow • Jira • Salesforce • BeyondTrust • Azure Active Directory • AWS IAM

Experience

Dev Support Engineer II

Mitratesh Holdings Inc. | May 2024 – Present

- Provide L2 application maintenance and production support for enterprise platforms and business-critical applications.
- Investigate and resolve production incidents through application log analysis, SQL-based data validation, system monitoring, and structured troubleshooting.
- Develop and optimize complex SQL queries to identify data inconsistencies and support application performance improvements.
- Perform root cause analysis (RCA) for recurring production incidents and implement corrective and preventive actions.
- Manage Git-based dev workflows, including branching, commits, pull request, merges for remote repositories.
- Support cloud-hosted applications and infrastructure in AWS environments through monitoring and operational maintenance.
- Collaborate with development teams on fixes, deployment validation, regression testing, and production issue resolution.
- Manage incident workflows and SLA requirements while collaborating with globally distributed technical teams.
- Monitor applications health, product servers, and client environments in high-availability platforms.
- Provide technical feedback to development teams and contribute to applications reliability and performance optimization.
- Collaborate with globally distributed technical teams on continues improvements and delivery initiatives.

Application Support & Data Analyst

Q2 Holdings Inc. | Oct 2022 – May 2024

- Provided production support for financial applications with focus on availability, data integrity, and SLA compliance.
- Analyzed transactional and financial datasets using advanced SQL, joins, CTEs, and stored procedures.
- Enhanced application usability and visual consistency through frontend HTML/CSS Improvements.
- Investigated data discrepancies, reconciliation issues, and application performance problems through RCA.
- Supported ETL processes and validated financial data consistency across multiple systems.
- Develop Power BI dashboards and KPI reports supporting finance, risk, and operations teams
- Translated business and financial requirements into data-driven technical solutions.
- Collaborate with Technical and Business stakeholders to investigate application and data-related issues

System Administrator

Tata Consultancy Services | Oct 2020 – Oct 2022

- Administered Windows Server and Linux environments supporting financial and stock-trading systems.
- Monitored server performance, availability, and capacity using Datadog in high-availability environments.
- Troubleshoot hardware, operating system, and application-level production issues.
- Managed user access, authentication, and security policies through Azure Active Directory.
- Supported incident, change and problem management process using ServiceNow.
- Implemented privileged access management processes using BeyondTrust.
- Analyzed logs and systems resources to identify performance issues and optimize server operations.
- Collaborated across teams to support disaster recovery and business continuity.

🎓 Education

Industrial Engineering & Administration

Universidad Tecnológica de México (UNITEC) | 2014 – 2018

Industrial Mechanical Engineering

Centro de Estudios Tecnológicos Industrial y de Servicios No.21 | 2008 – 2011

💡 Professional Development

- AI Engineering & Machine Learning — In Progress
- Full Stack Web Development — 2025
- IT Service Management (ITSM) — 2025
- Software Development — 2025
- Database Development — 2022
- SQL Development — 2022
- Project Management — 2022
