Experience

Mitrtech Holdings Inc.

Role: Dev Support Engineer II

Guadalajara Jal, Mex

May 2024 - Present (1 year 9 months)

Job Summary:

- Provide L2 application maintenance and production support for enterprise platforms.
- Investigate, troubleshoot, and resolve production incidents through detailed log analysis and SQL-based data validation.
- Write and optimize complex SQL queries to identify data inconsistencies, support issue resolution, and improve application performance.
- Support cloud-hosted applications and infrastructure in AWS environments, including monitoring and operational maintenance activities.
- Perform root cause analysis (RCA) for recurring production issues and implement corrective and preventive actions.
- Assist development teams with code fixes, deployment validation, and rigorous regression testing where required.
- Develop and maintain automation or support scripts using Java and Python scripting languages to improve operational efficiency.
- Monitor product servers, application health, and client environments on high-availability platforms.
- Collaborate with cross-functional global teams to support continuous improvement and continuous delivery initiatives.
- Provide technical feedback to development teams and contribute to performance optimization of business-critical applications.
- Work with Unix/Linux systems for process monitoring, troubleshooting, file handling, and server-side operational support.
- Support incident management, issue tracking, and operational workflows while ensuring SLA compliance and timely resolution of production issues.

Q2 Holdings Inc.

Role: App Support and Data Analyst

Guadalajara Jal, Mex

Oct 2022 – May 2024 (1 year 7 months)

Job Summary:

- Provide production support for financial applications, ensuring high availability and SLA compliance.
- Analyze transactional and financial datasets using advanced SQL queries, joins, CTEs, and stored procedures.
- Develop interactive dashboards and KPI reports in Power BI to support finance, risk, and operations teams.
- Perform root cause analysis (RCA) for data discrepancies, reconciliation breaks, and system performance issues.
- Utilize Python for data cleansing, automation, and exploratory data analysis.
- Support ETL processes and validate financial data integrity across multiple systems.
- Collaborate with business stakeholders to translate financial requirements into data-driven solutions.

TATA Consultancy Services Limited

Role: System Administrator

Queretaro Qro, Mex

Oct 2020 – Oct 2022 (2 years)

Job Summary:

- Administer and maintain Windows Server and Linux environments supporting stock trading and financial systems.
- Monitor server performance, availability, and capacity using Datadog to ensure minimal downtime.
- Troubleshoot hardware, OS, and application-level issues in high-availability trading environments.
- Manage user access, authentication, and security policies through Azure AD.
- Handle incident, change, and problem management processes using ServiceNow.
- Implement privileged access management (PAM) solutions using BeyondTrust to enhance security compliance.
- Perform system patching, upgrades, and vulnerability remediation in production environments.
- Optimize server performance through resource monitoring, log analysis, and tuning.
- Support disaster recovery (DR) and business continuity planning initiatives.
- Collaborate with network, security, and application teams to ensure system reliability during market hours.
